$\qquad$
Coulomb's Law can be states in equation form as

$$
F_{e}=\frac{k\left|q_{1} q_{2}\right|}{r^{2}}
$$

This equation can be used as an algebraic recipe for solving computational problems or as a guide to thinking about how an alteration in the quantity of charge or the distance between charged objects effects the amount of attractive or repulsive force.

## Using Coulomb's Law as a "Guide to Thinking" Alteration in the Quantity of Charge

_ 1. Two charged objects have a repulsive force of .080 N . If the charge of one of the objects is doubled, then what is the new force?
2. Two charged objects have a repulsive force of .080 N . If the charge of both of the objects is doubled, then what is the new force?

## Alteration in the Distance between Charged Objects

$\qquad$ 3. Two charged objects have a repulsive force of .080 N . If the distance separating the objects is doubled, then what is the new force?
___ 4. Two charged objects have a repulsive force of .080 N . If the distance separating the objects is tripled, then what is the new force?
_ 5. Two charged objects have an attractive force of .080 N . If the distance separating the objects is quadrupled, then what is the new force?
__ 6. Two charged objects have a repulsive force of .080 N . If the distance separating the objects is halved, then what is the new force?

## Alteration in both the Quantity of Charge and the Distance

_ 7. Two charged objects have a repulsive force of .080 N . If the charge of one of the objects is doubled, and the distance separating the objects is doubled, then what is the new force?
$\qquad$ 8. Two charged objects have a repulsive force of .080 N . If the charge of both of the objects is doubled and the distance separating the objects is doubled, then what is the new force?
_ 9. Two charged objects have an attractive force of .080 N . If the charge of one of the objects is increased by a factor of four, and the distance separating the objects is doubled, then what is the new force?
_10. Two charged objects have an attractive force of .080 N . If the charge of one of the objects is tripled and the distance separating the objects is tripled, then what is the new force?

## Using Coulomb's Law as an "Algebraic Recipe"

11. A balloon with a charge of $4.0 \times 10^{-5} \mathrm{C}$ is held a distance of 0.10 m from a second balloon having the same charge. Calculate the magnitude of the repulsive force. PSYW
12. Calculate the electrical force (in Newtons) exerted between a 22 -gram balloon with a charge of $-2.6 \mu \mathrm{C}$ and a wool sweater with a charge of $+3.8 \mu \mathrm{C}$; the separation distance is 0.75 m . PSYW
13. Suppose that two equally charged spheres attract each other with a force of 0.492 N when placed a distance of 29.1 cm from each other. Determine the charge of the spheres. PSYW
14. A $+5.0 \mu \mathrm{C}$ charge and a $-6.0 \mu \mathrm{C}$ charge experience an attractive force of 0.72 N . Determine their separation distance. PSYW
15. A balloon has been rubbed with wool to give it a charge of $-1.0 \times 10^{-6} \mathrm{C}$. A plastic tube with a charge of $+4.0 \times 10^{-6} \mathrm{C}$ is held a distance of 0.50 m above the balloon. Determine the electrical force of attraction between the tube and the balloon. PSYW

In the space at the right, construct a free-body diagram showing the direction and the type of all forces acting upon the 30.0 -gram balloon.

Will the balloon accelerate up, down, or not at all? $\qquad$ If there is an acceleration, then calculate its value. (Assume that the plastic tube is held a constant distance of 0.5 m from the balloon.) PSYW
