## ENERGY PROBLEMS for you, to do, shoo be do bee do...

by
(E\&P only)

## Let $g=9.80 \mathrm{~m} / \mathrm{s}^{2}$. Remember to round off answers appropriately.

1) A window washer on a scaffold 10.0 meters high kicks the bucket, so to speak, off the scaffold with a speed of $3.00 \mathrm{~m} / \mathrm{sec}$. How fast will the bucket be traveling when it hits the sidewalk below?

Ans:
2) A low and inside pitch on Opening Day hits the dirt behind home plate at $35 \mathrm{~m} / \mathrm{sec}$. If the ball was released from the pitcher's arm 2.5 meters above the level of the field, how fast did the pitcher throw the ball?

Ans:
3) You throw something at $5.0 \mathrm{~m} / \mathrm{sec}$, and it hits the ground at $8.0 \mathrm{~m} / \mathrm{sec}$. How far above ground level are you?

Ans:
4) A bird is flying with a speed of $18.0 \mathrm{~m} / \mathrm{s}$ over water when it accidentally drops a 2.00 kg fish. If the altitude of the bird is 5.40 m and friction is disregarded, what is the speed of the fish when it hits the water?
5) A 755 N diver drops from a board 10.0 m above the water's surface. Find the diver's speed 5.00 m above the water's surface. Then find the diver's speed just before striking the water.

Ans:
Ans:
6) If the diver in item 2 leaves the board with an initial upward speed of $2.00 \mathrm{~m} / \mathrm{s}$, find the diver's speed when striking the water.

Ans:
7) A pendulum bob is released from some initial height such that the speed of the bob at the bottom of the swing is $1.9 \mathrm{~m} / \mathrm{s}$. What is the initial height of the bob?

Ans:
8) How long does it take a 19 kW steam engine to do $6.8 \times 10^{7} \mathrm{~J}$ of work?

Ans:
9) A $1.50 \times 10^{3} \mathrm{~kg}$ car accelerates uniformly from rest to $10.0 \mathrm{~m} / \mathrm{s}$ in 3.00 s . What is the change in kinetic energy of the car? What is the power delivered by the engine in this time interval?

Ans:
Ans:
