1. The air exerts a forward force of 10.0 N on the propeller of a 0.20 kg model airplane. If the plane accelerates forward at $2.0 \mathrm{~m} / \mathrm{s}^{2}$, what is the magnitude of the resistive force exerted by the air on the airplane?

Ans:
2. A 5.0 gram bullet leaves the muzzle of a rifle with a speed of $320 \mathrm{~m} / \mathrm{s}$. What force (assumed constant) is exerted on the bullet while it is traveling down the 0.82 m long barrel of the rifle?

Ans:
3. The force of the wind on the sails of a sailboat is 390 N north. The water exerts a force of 180 N east. If the boat, including the crew, has a mass of 270 kg , what are the magnitude and direction of its acceleration?

Ans:

Answer to \#4 is $\mu_{\mathrm{s}}=0.383, \quad \mu_{\mathrm{k}}=0.306 \quad$ Answer to $\# 5$ is $\mathrm{a}=-1.20 \mathrm{~m} / \mathrm{s}^{2}, \quad \mu_{\mathrm{k}}=0.122, \quad \mathrm{~d}=45.0 \mathrm{~m}$

## Newtonian Mechanics Review Puzzles (Pre-AP)

4. A dockworker loading crates on a ship finds that a $2.0 \times 10^{1} \mathrm{~kg}$ crate, initially at rest on a horizontal surface, requires a 75 N horizontal force to set it in motion. However, after the crate is in motion, a horizontal force of $6.0 \times 10^{1} \mathrm{~N}$ is required to keep it moving at constant speed. Find the coefficients of static and kinetic friction between the crate and floor.

Ans:
Ans:
5. A hockey puck is hit on a frozen lake and starts moving with a speed of $12.0 \mathrm{~m} / \mathrm{s} .5 .00$ seconds later, its speed is 6.00 $\mathrm{m} / \mathrm{s}$. What is its average acceleration? What is the average value of the coefficient of kinetic friction between puck and ice? How far does the puck travel during this 5.00 s interval?

Ans:
Ans:
Ans:

Answer to \#1 is F $=9.6 \mathrm{~N}$, Answer to $\# 2$ is $\mathrm{F}=310 \mathrm{~N}$, Answer to $\# 3$ is a $=1.6 \mathrm{~m} / \mathrm{s}^{2} 65^{\circ}$ North of East

6. 

Block A (mass 8.00 kg ) is moving up a 30.0 degree incline and is attached by a cord to block B (mass 22.0 kg ) hanging over the end of the incline via a pulley. If the coefficient of kinetic friction between block A and the incline is 0.28 , find the tension in the cord and the acceleration of the system.

Ans:
Ans:

## Newtonian Mechanics Review Puzzles (Pre-AP)

Answer to $\# 6$ is $\mathrm{F}_{\mathrm{T}}=1.0 \times 10^{2} \mathrm{~N}$ and $\mathrm{a}=5.2 \mathrm{~m} / \mathrm{s}^{2}$
